

STAND™

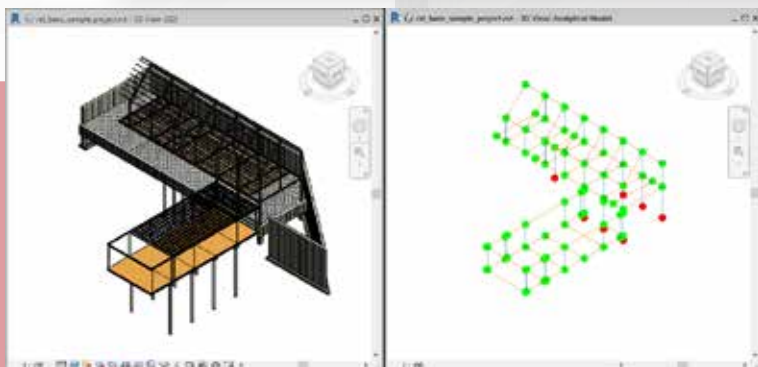

Structural Analysis and Design for Revit

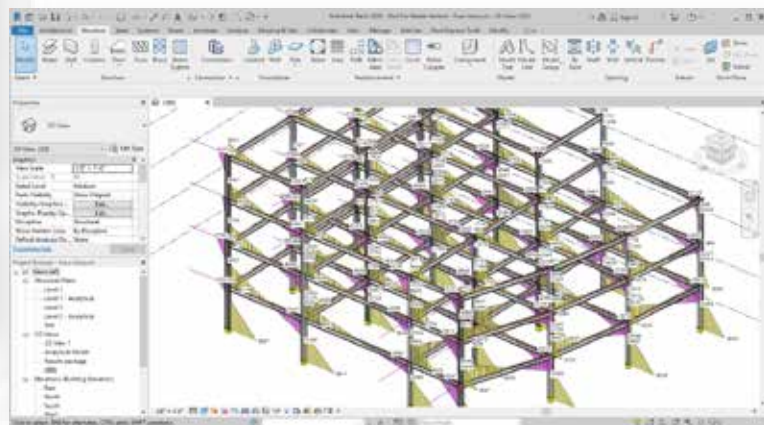

- Review results in the familiar Revit environment.
- Structural model stays in-sync with the rest of building model.
- Take advantage of the built-in scheduling and drafting capabilities of Revit to generate shop drawings.

- A brand new software system that can be expanded by developers as well as customized by users.

- Use additional data stored in Revit to perform more advanced analyses.

- A structural model that is entirely based on the analytical model constructed in Revit.

STAND lets structural engineers perform the most common structural analysis and design tasks inside the Revit© environment without the need of external structural models and applications. This application is intended to

eliminate the need for the cumbersome and error-prone practice of numerous importing and exporting of models between Revit and other structural applications.
