"If you use just one of the CIM Project Suite tools, it will pay for the entire set of tools."

- **Label Genie**
  Automate labeling across projects, including Civil 3D® and AutoCAD® annotation, on multiple drawings and layouts at once.

- **Data Wizard**
  Creates project-specific legends or quantity takeoffs of all AutoCAD and Civil 3D point-, line- and area-type objects.

- **Sheet Generator**
  Create plan and profile sheets that auto update after project changes, including readjustment of viewports, north arrows and sheet placement.

---

**CORRIDORS & GRADING**

- **Auto Grader**
  A game changer in site grading, create dynamic site grading models by linking feature line sets.

- **Earthwork Processor**
  Calculate complex site earthworks through dynamic Civil 3D surfaces and automatically label, table and hatch results.

- **Corridor Mapper**
  Automatically assign corridor targets by mapping subassemblies to layers, styles, object names or other subassemblies to create a dynamic link that updates the corridor as more target objects are created.

- **Corridor Merger**
  Merge two or more corridors into one, and maintain all targets and settings.

- **Corridor Splitter**
  Split a single corridor into two.

- **Corridor Cleanup (Free Tool)**
  Select multiple corridors, baselines or regions, and in one click remove all surface, width and/or slope targets.

Civil 3D users will find great value in the CIM Project Suite. With time-saving tools for corridors, pipe networks, legends, sheet creation, surveying and layer management, users of all levels will benefit.

- Faster sheet editing and annotation
- Build pipe networks more efficiently
- Create more dynamic corridors
- Streamline survey workflows
“As we've grown, CTC has provided the support we've needed to keep up with technology changes and growing needs. We've never been disappointed.” — Westlake Reed & Leskosky

**PIPE NETWORKS**

**Pipe Designer**
Design pipe runs inside the Civil 3D drawing using a spreadsheet interface.

**Parts Tagger**
Auto-populate one or more properties of pipe network parts for labeling or tabling.

**Parts Swapper (Free Tool)**
Allows for multiple pipe network parts (structures and pipes) to be swapped for alternative parts simultaneously.

**GENERAL & SURVEY**

**Point File Converter**
Convert survey point files from one code list to another, allowing field work in one code list, and CAD processing in another, without losing time.

**Layer Trace**
Better manage layers in drawings and templates by tracking their use in Civil 3D styles. Then swap out layers for others.

**Feature Line to Alignment (Free Tool)**
Creates an alignment and layout profile from a feature line or survey figure.

**Survey Sweeper (Free Tool)**
Simultaneously delete selected survey points and survey figures from drawings and survey databases.

High Quality, Cost Effective, Proven ROI
CIM Manager Suite

“Easy to use tools that take minutes up front to save hours in the end, this increases the bottom line for everyone.”

Casey Bekkerus, Ulteig Inc.

TEMPLATE & STANDARDS MANAGEMENT

Linetype Manager (Free Tool)
Create and edit AutoCAD linetypes through an easy-to-use, graphical interface instead of the tedious .lin file.

Template Tracker
Speed up template maintenance by tracking and replacing embedded layers, text, dimension and leader styles in any drawing or template.

Survey Template Manager
Speed up Civil 3D survey template management by automatically creating and syncing description keys and figure prefix databases from an Excel spreadsheet.

Layer Boss
Optimize layer management by automatically creating and syncing template layers and Civil 3D object layer settings from an Excel spreadsheet.

Civil 3D and AutoCAD production management staff will greatly benefit from the CIM Manager Suite. Tools for automated style, layer and linetype creation and editing will make supporting production teams easier than ever.

- Build better CAD standards
- Edit/create templates quickly
- Efficiently update project standards
- Validate standards compliance
