

HIVE™

Content Management System

CTC SOFTWARE™
DESIGN SOLUTIONS

*"CTC's knowledge and expertise makes my BIM manager's role a huge success.
(HIVE) is a must for all Revit users!"*

- Michael R., Autodesk Marketplace Five Star Review

HIVE

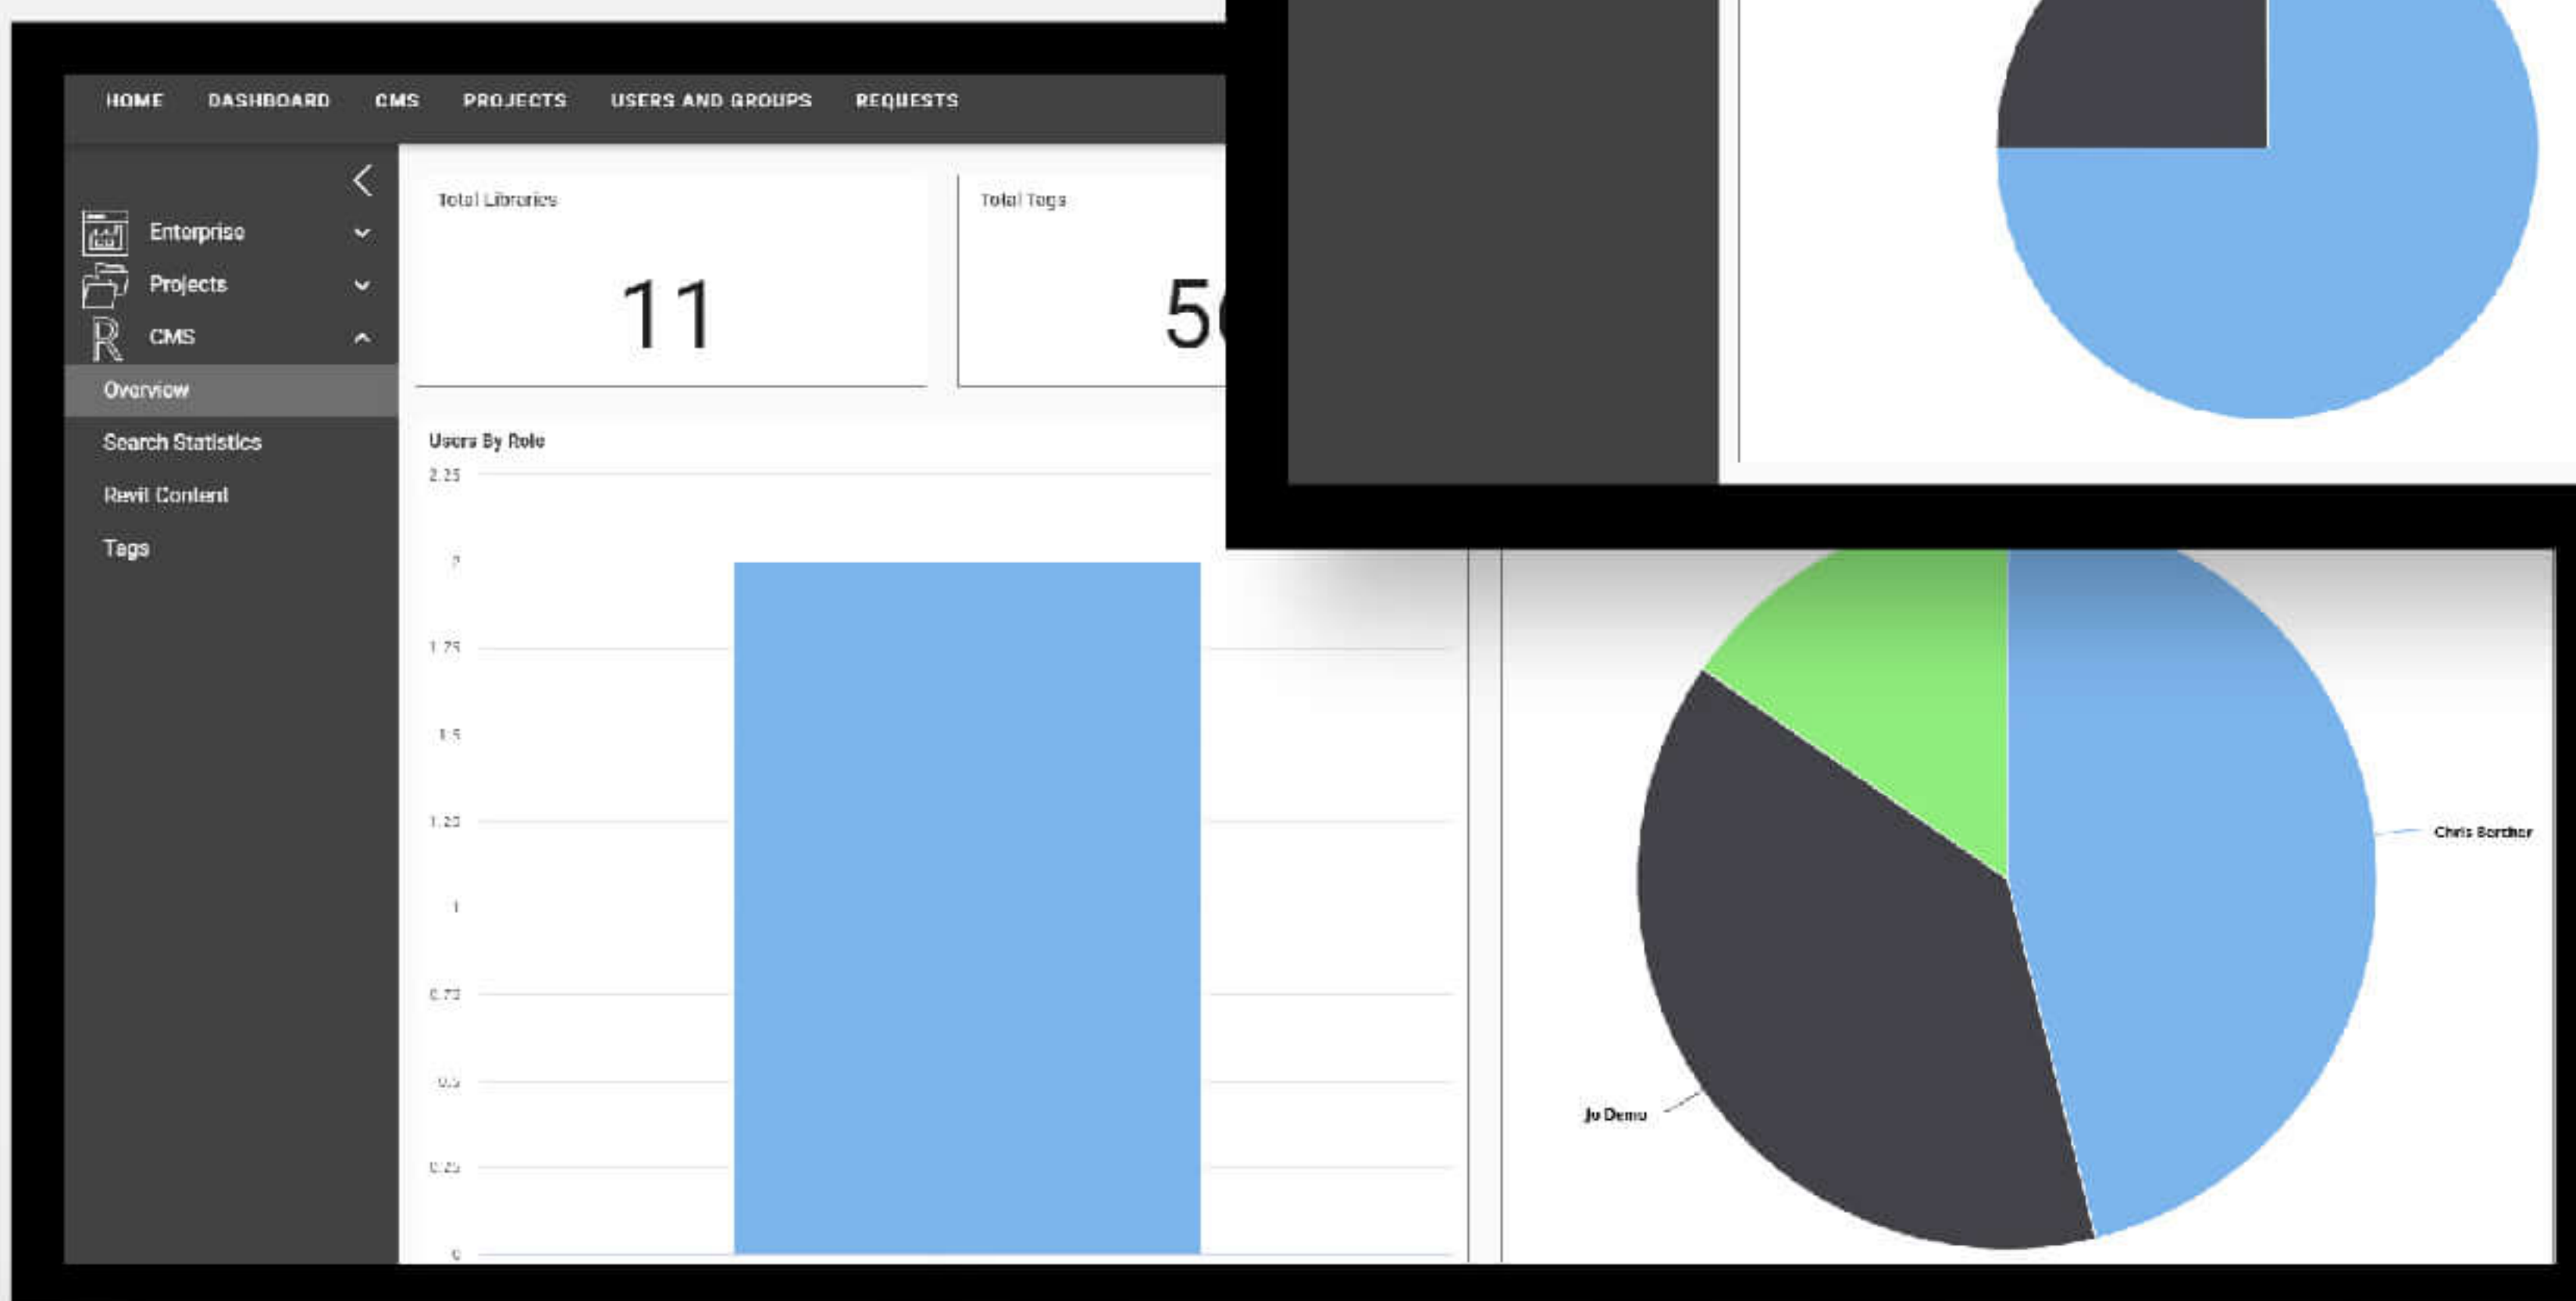

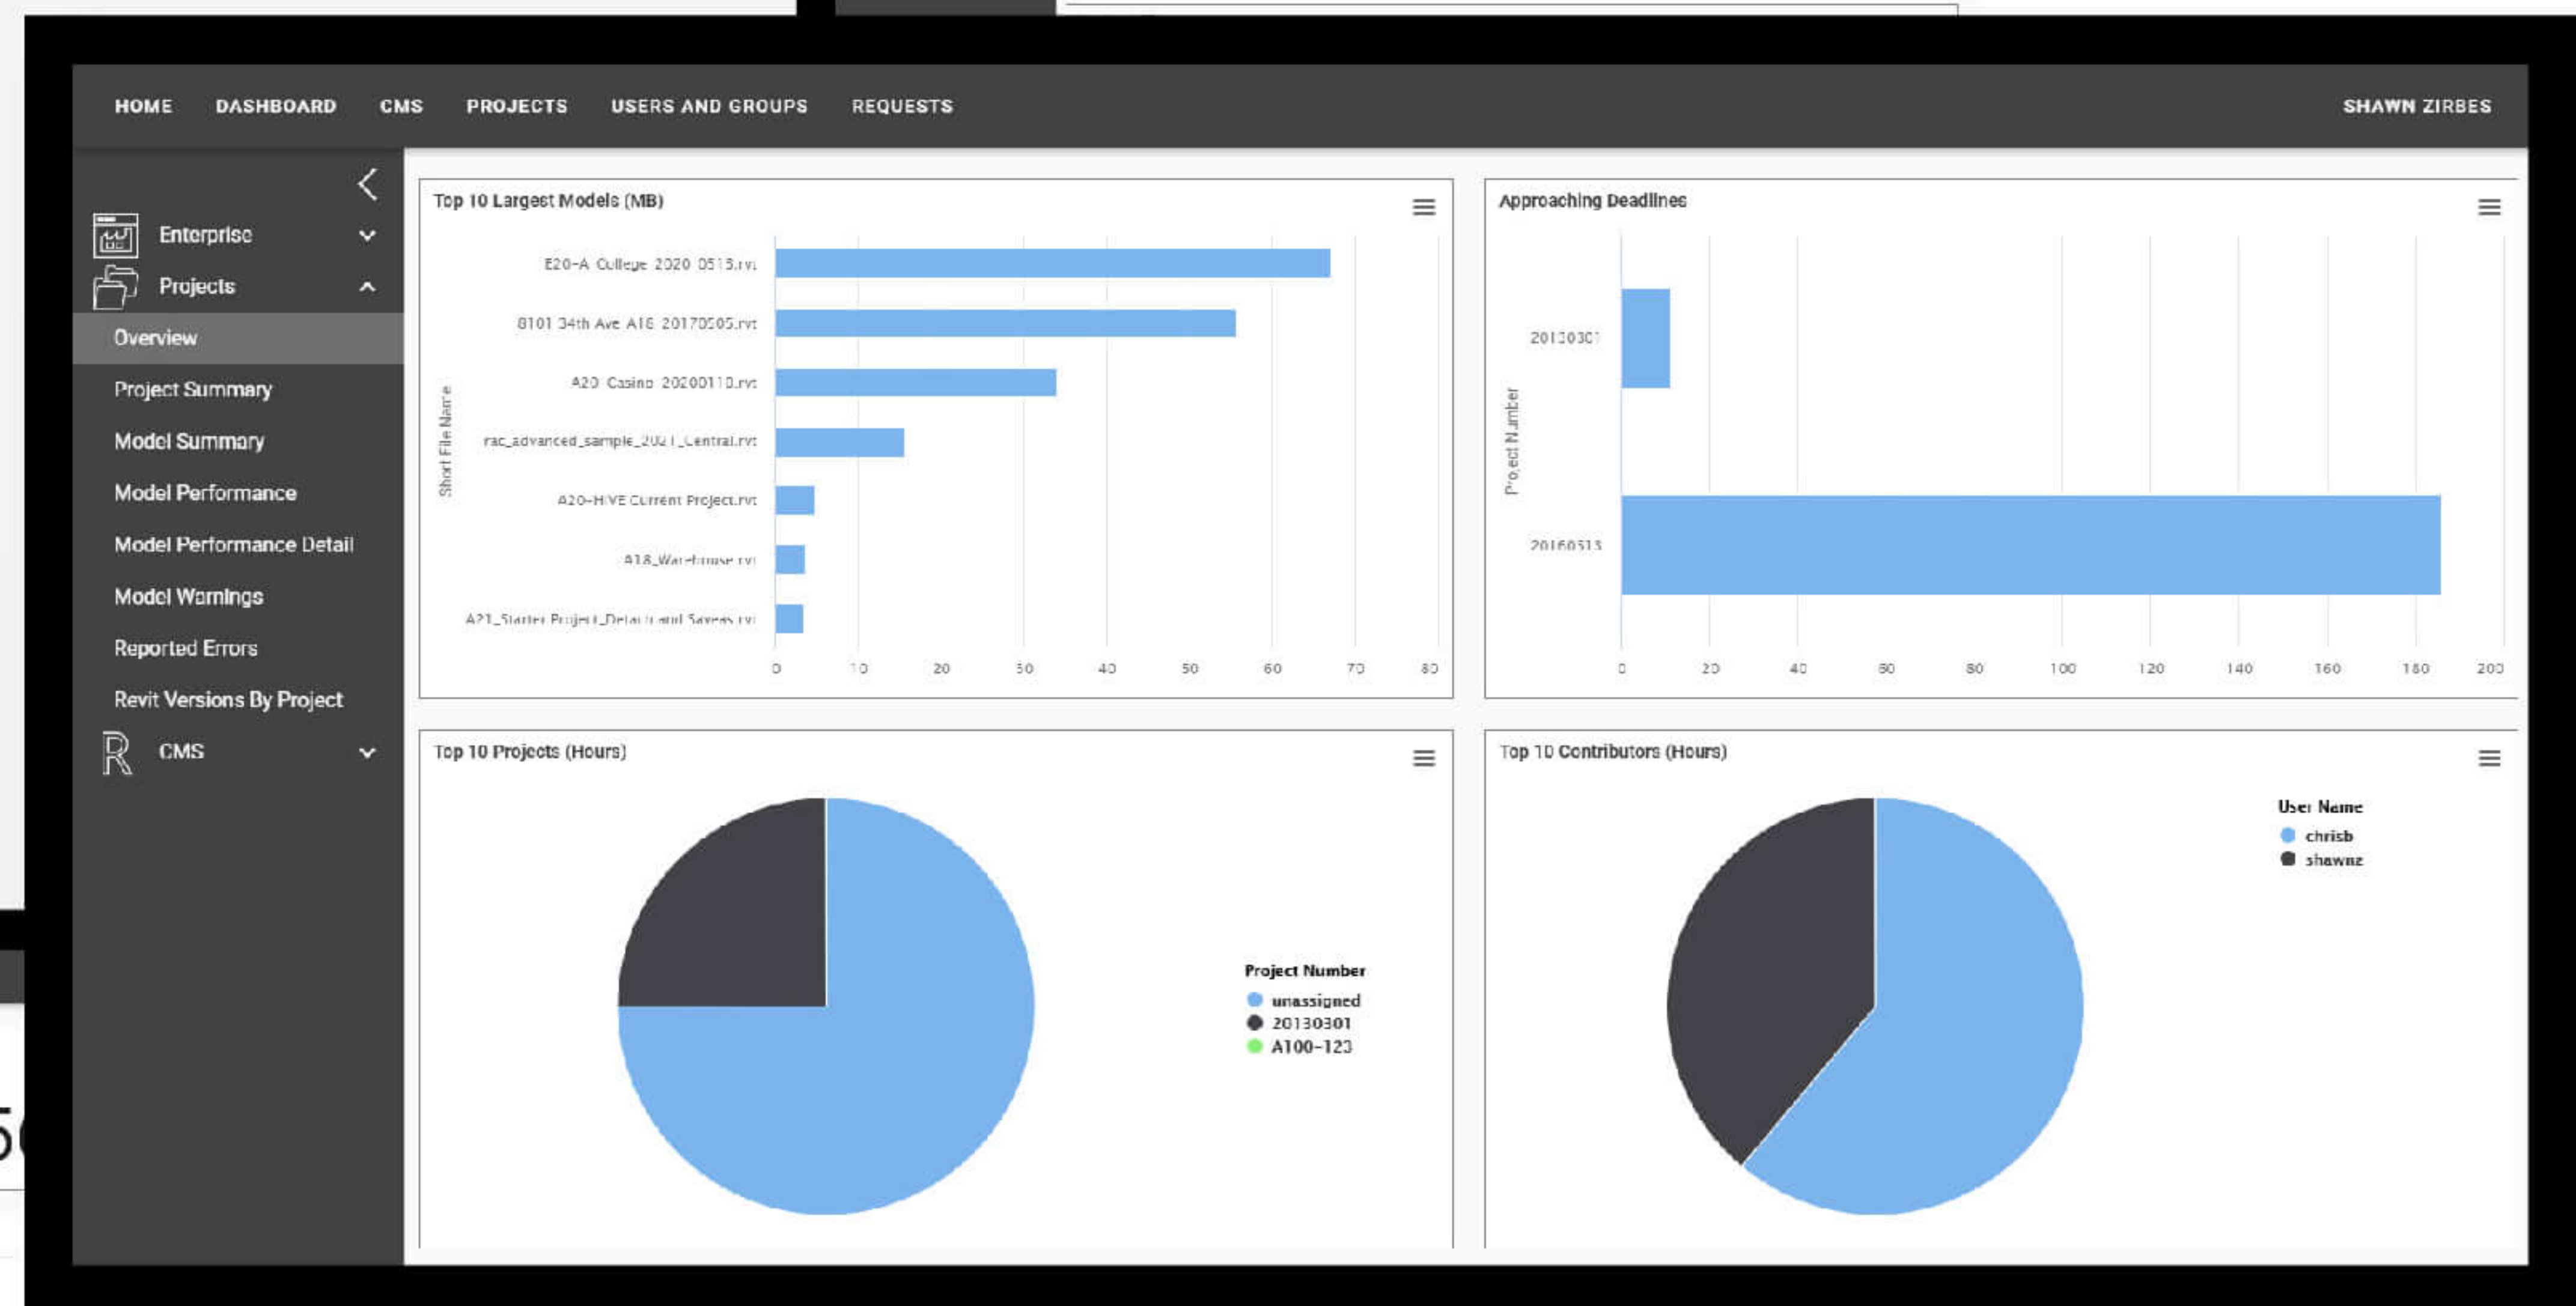

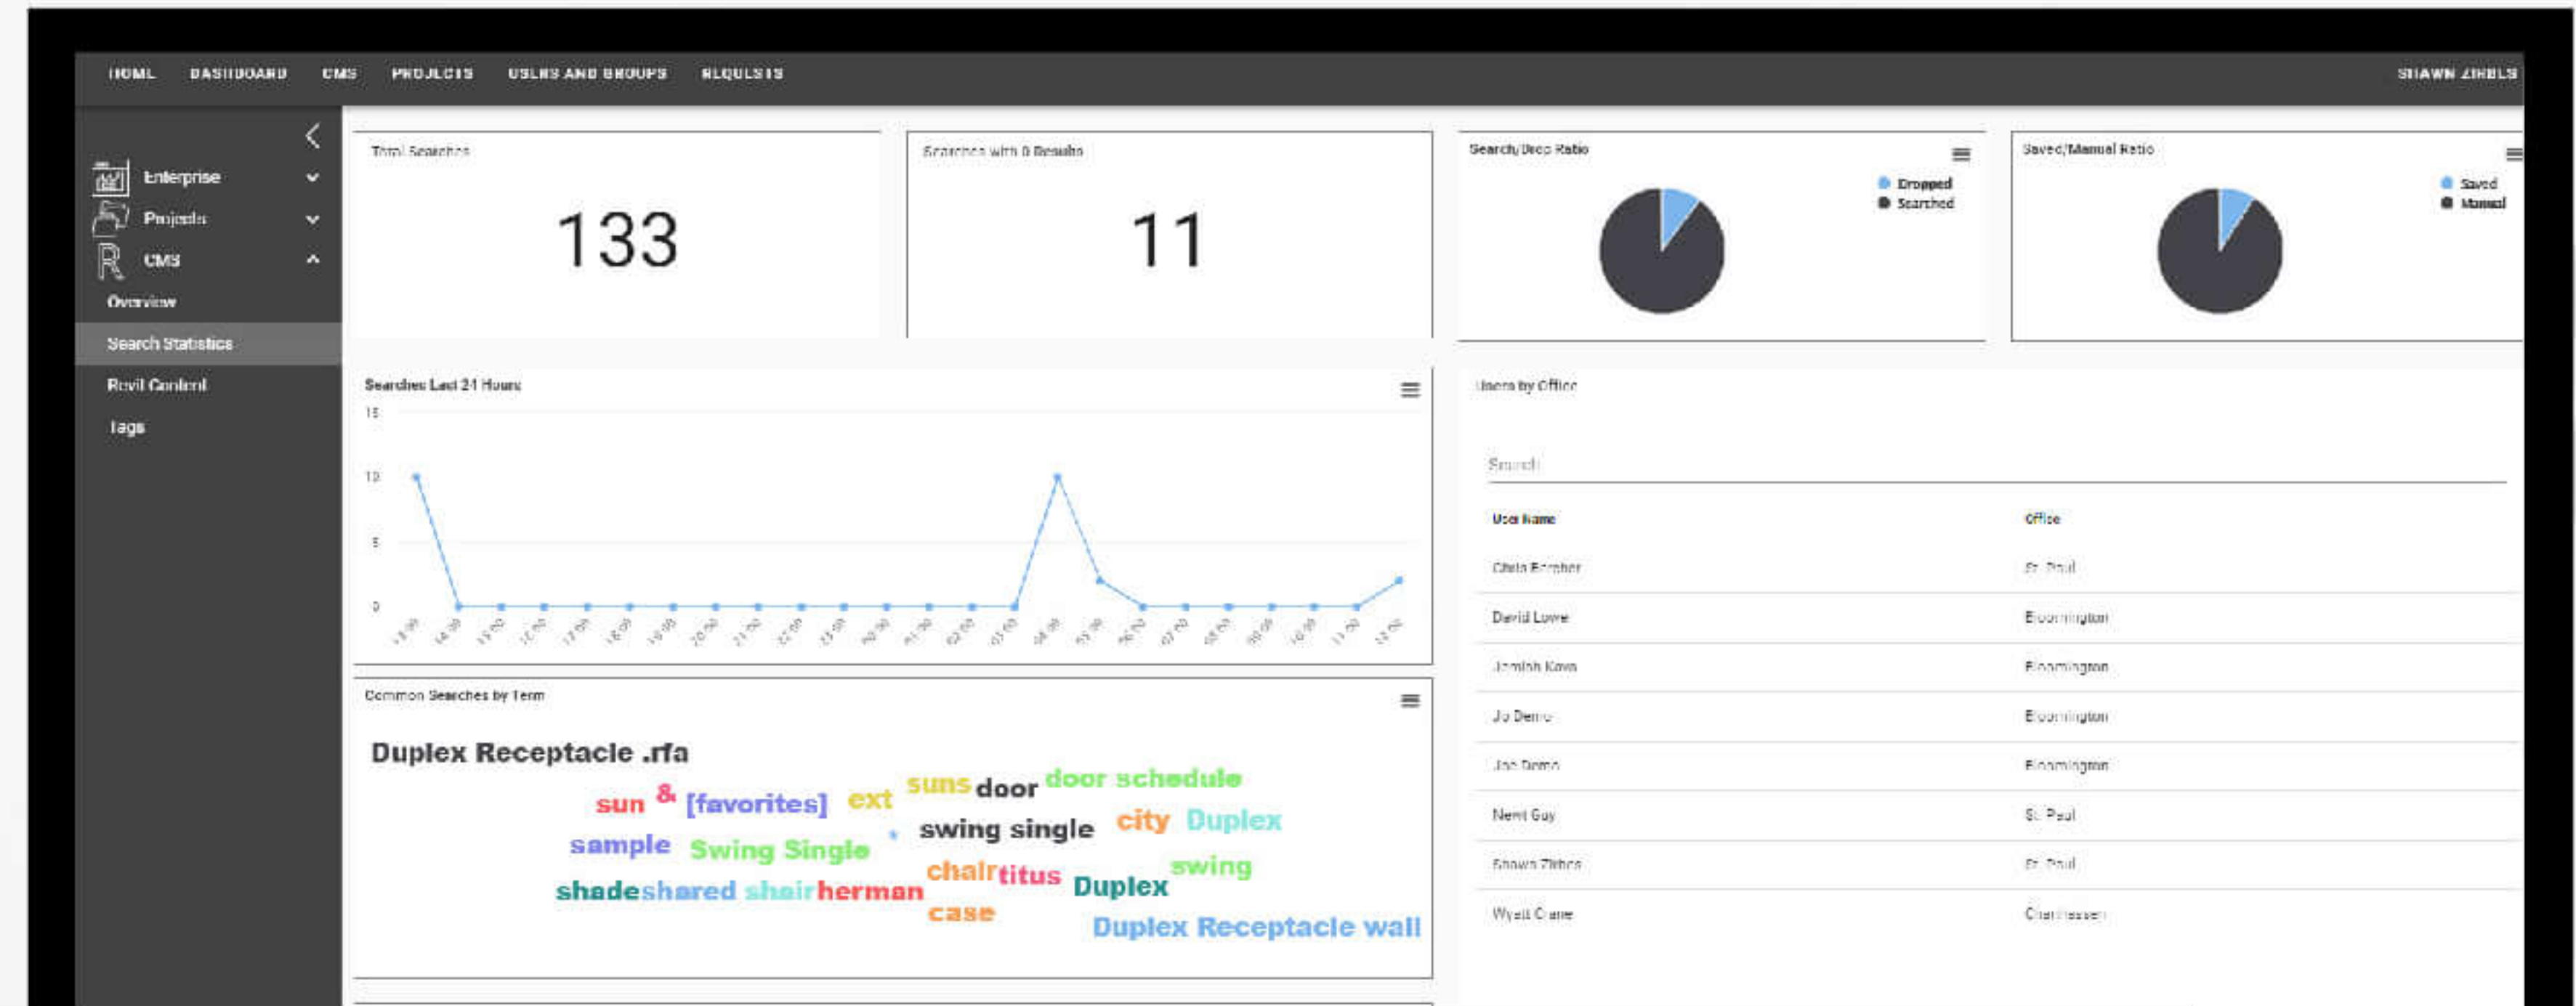

Content Management System

"This has been a real life saver on a few projects recently."

- Steven A. Seibert, Advanced Engineering & Environmental Services, Inc.

Dashboards

HIVE is a leading content management system developed specifically for the AEC industry. Firms can organize, manage, set permissions and ensure the latest content is kept up to date and available for all project participants, even when working remotely. Users can quickly find Revit, AutoCAD, PDF, images and other file types using libraries, tags, favorites and file metadata.

BIM managers can get performance metrics based on:

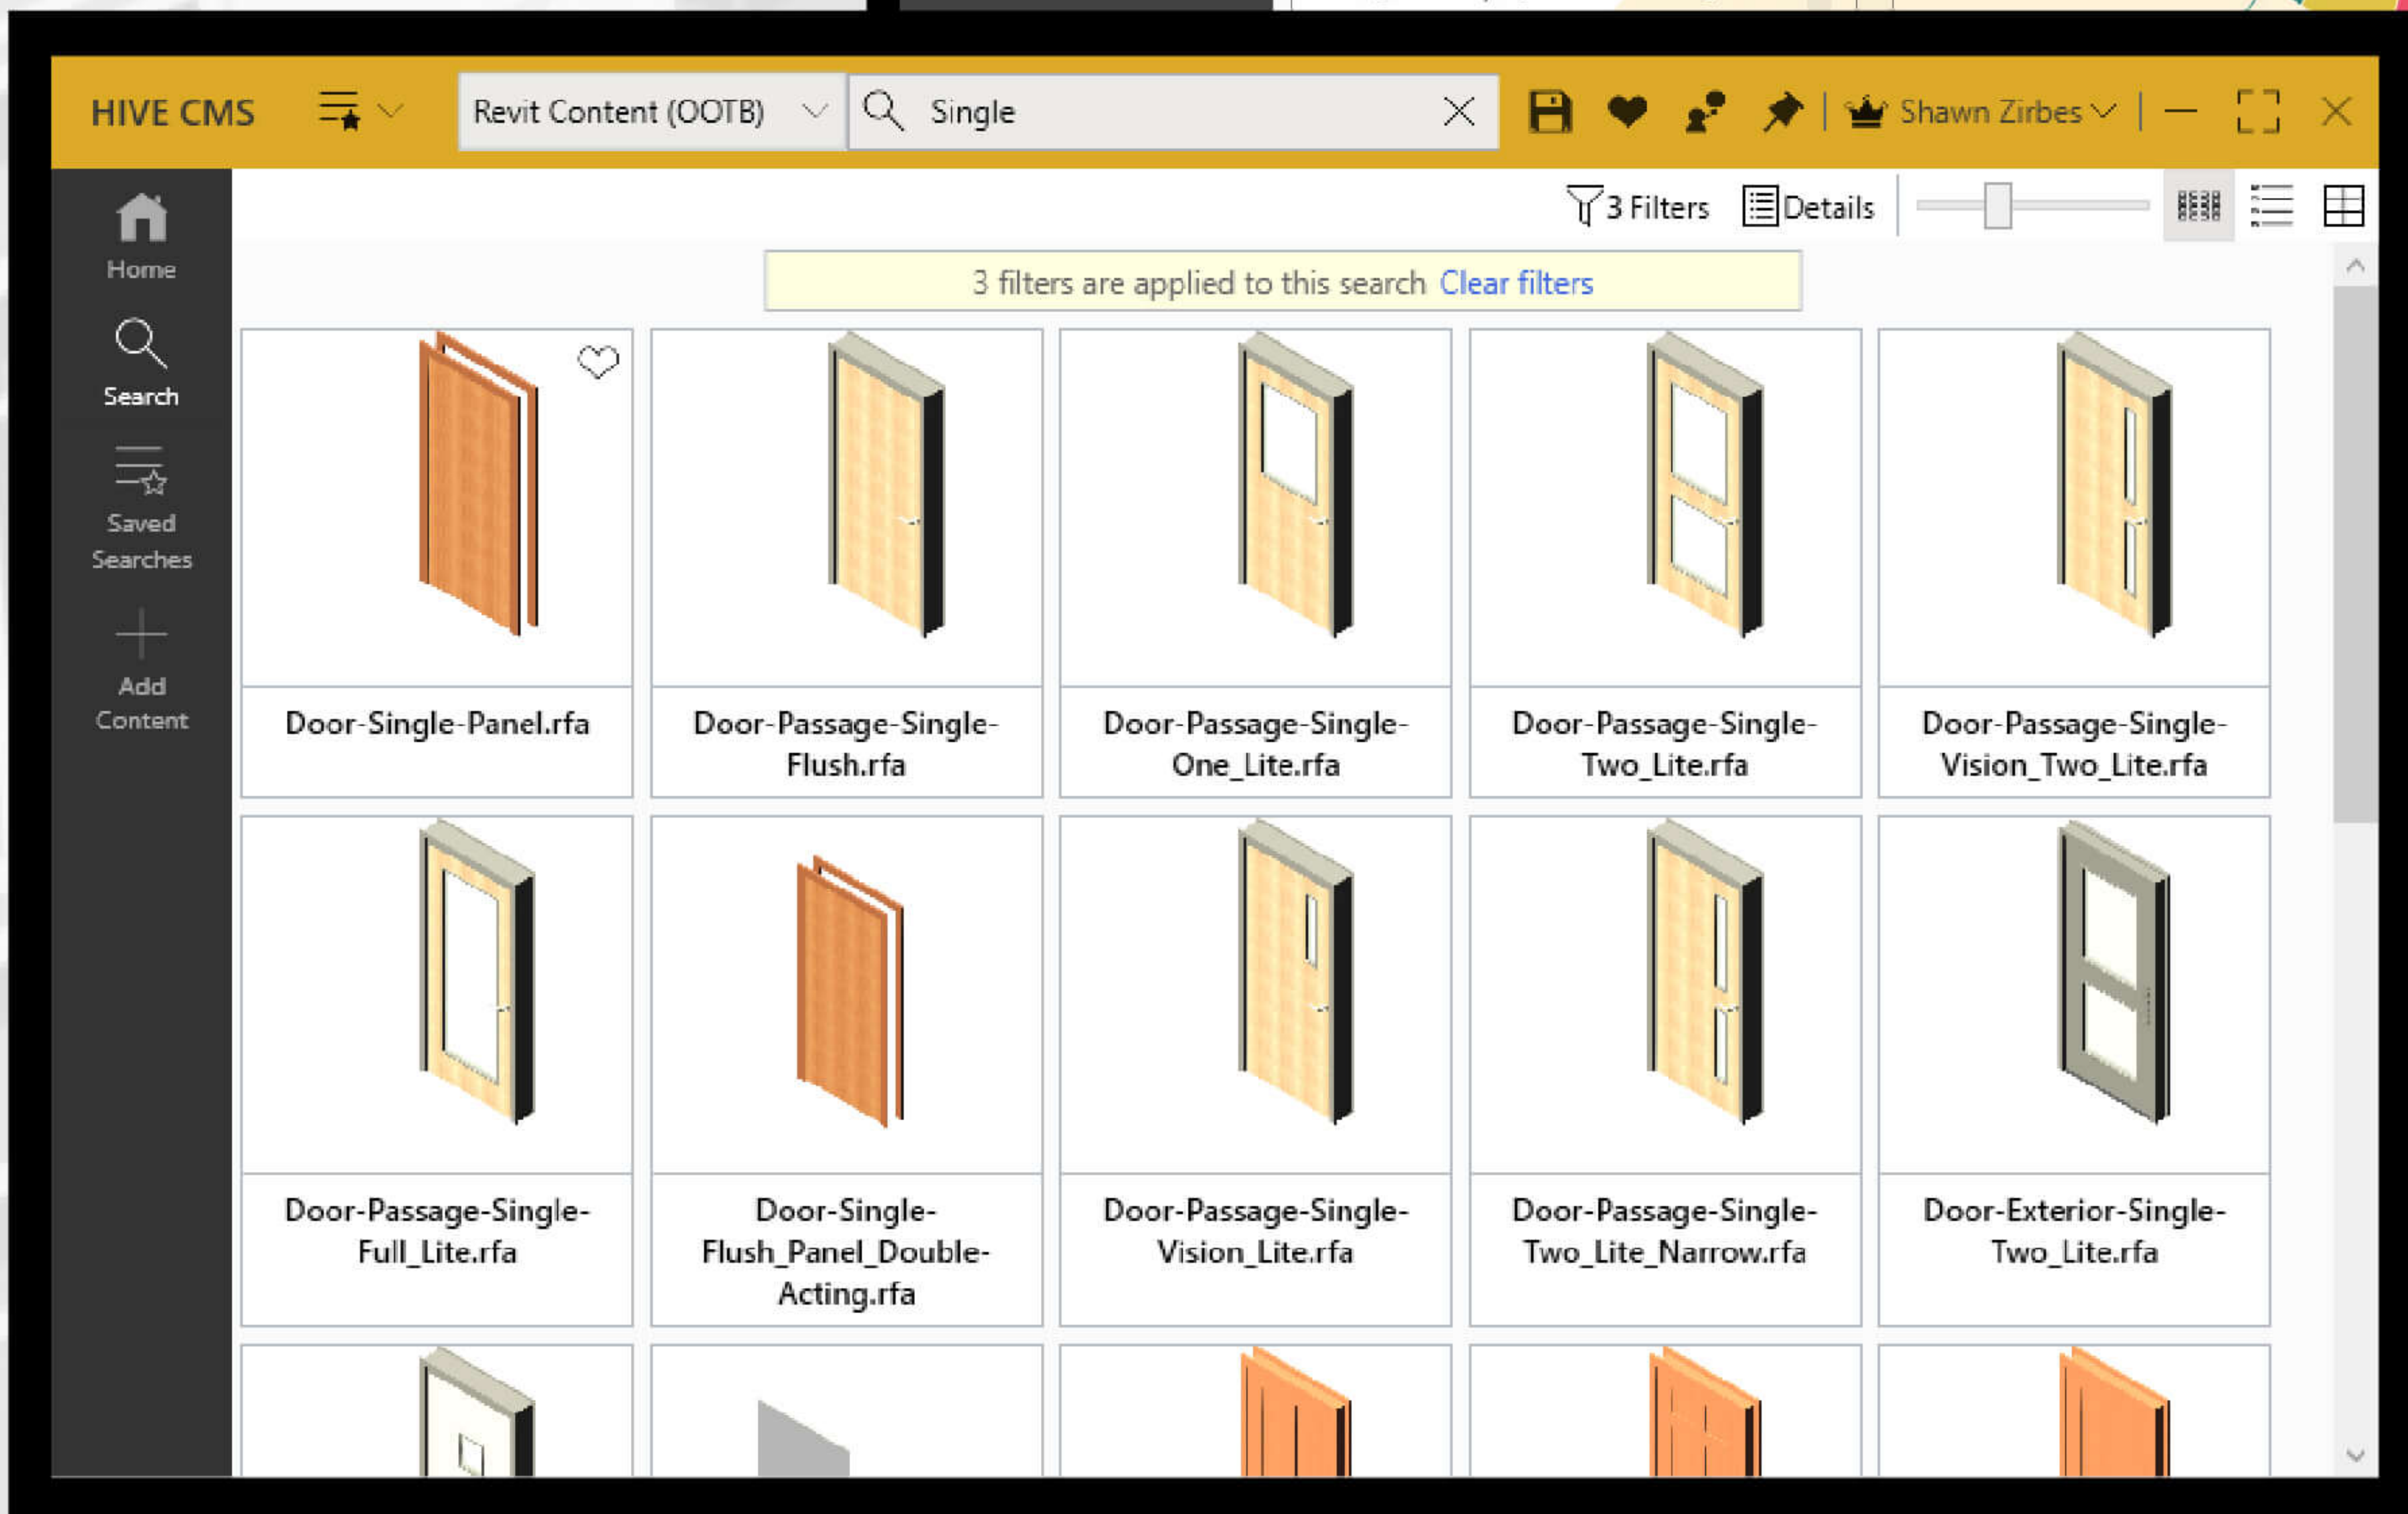

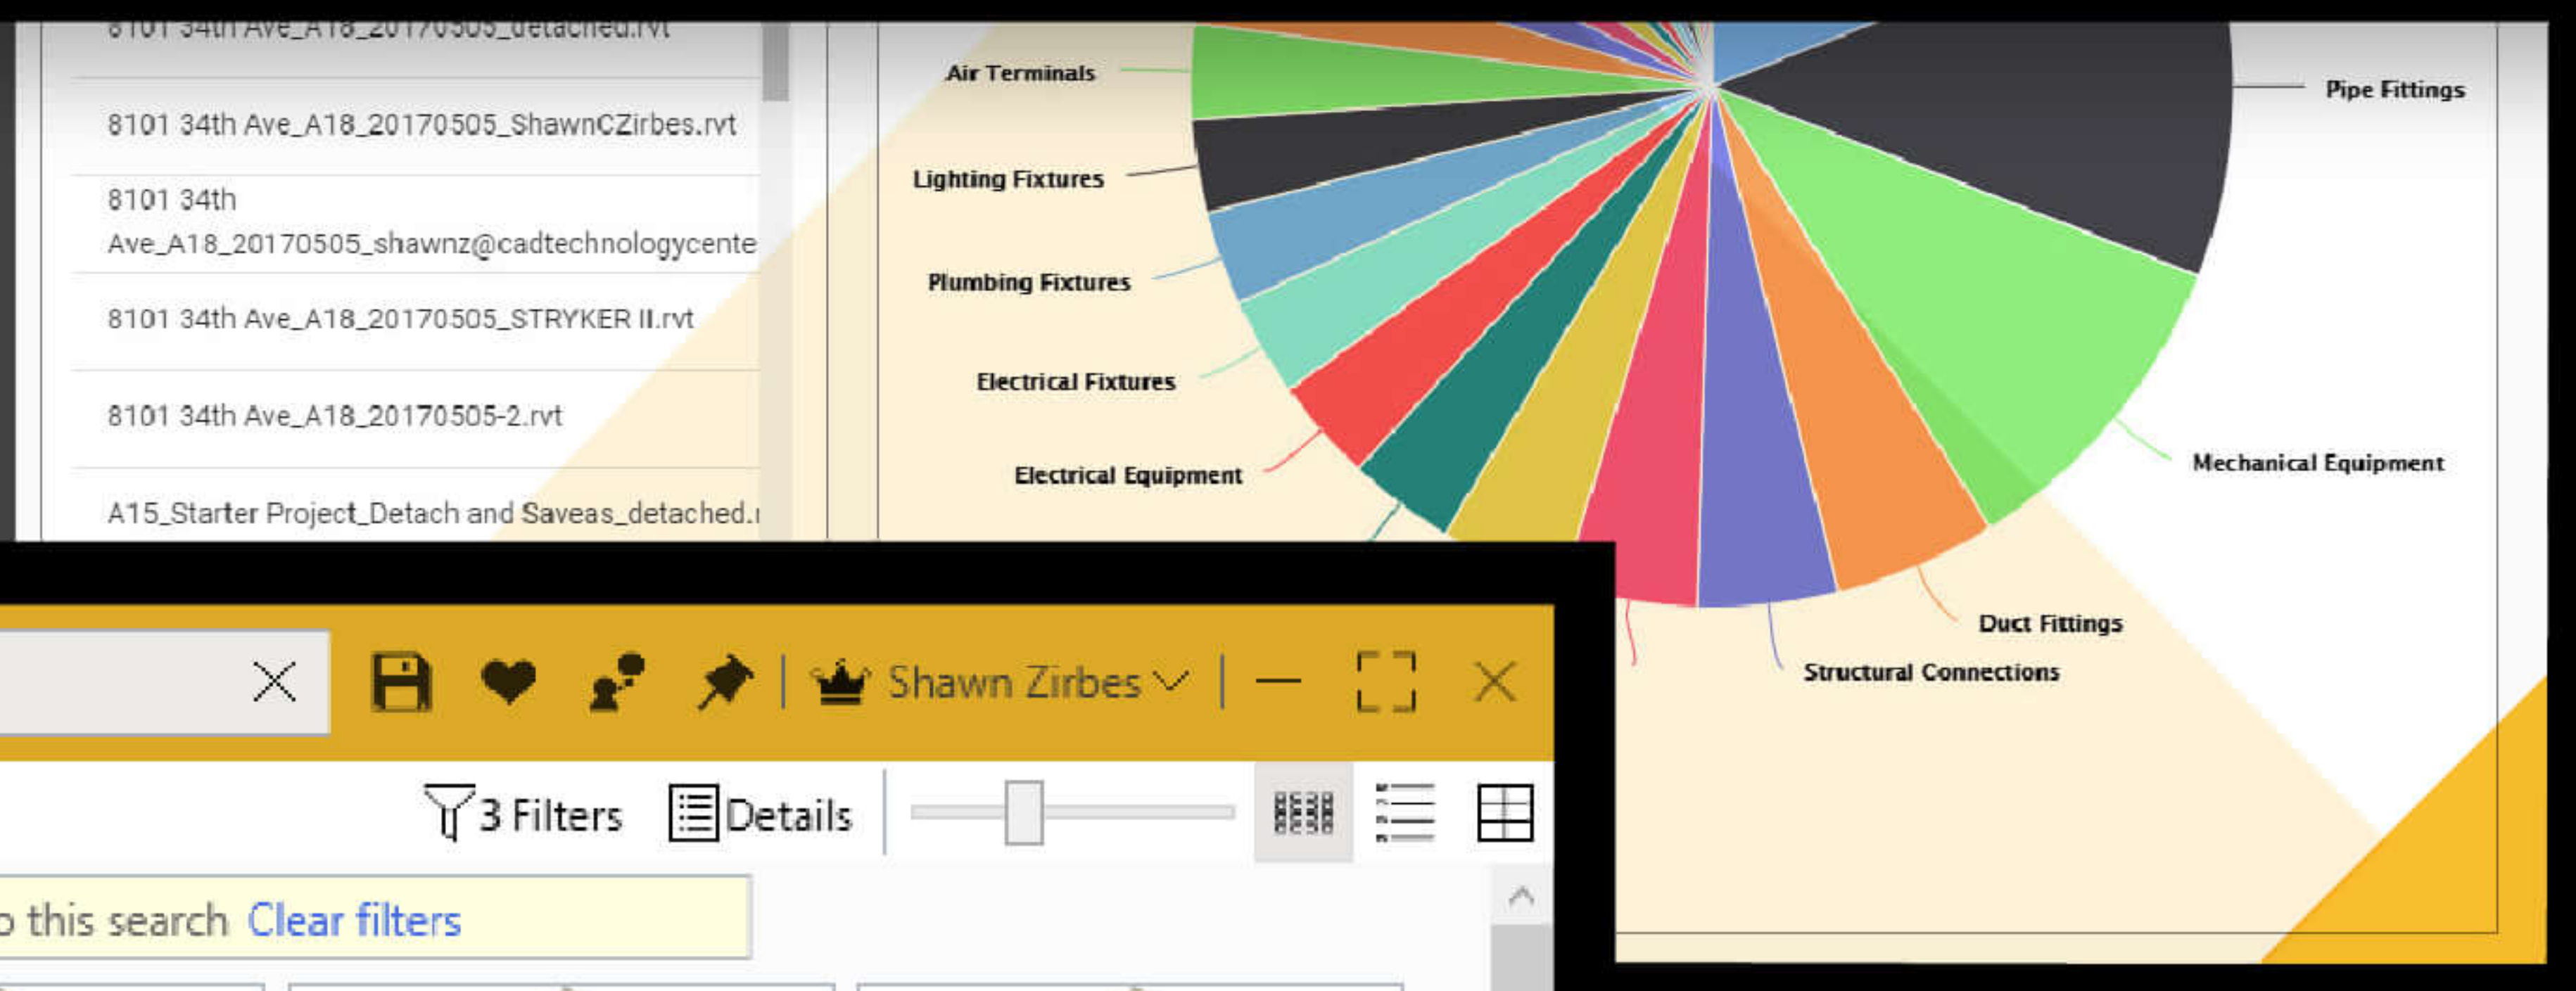

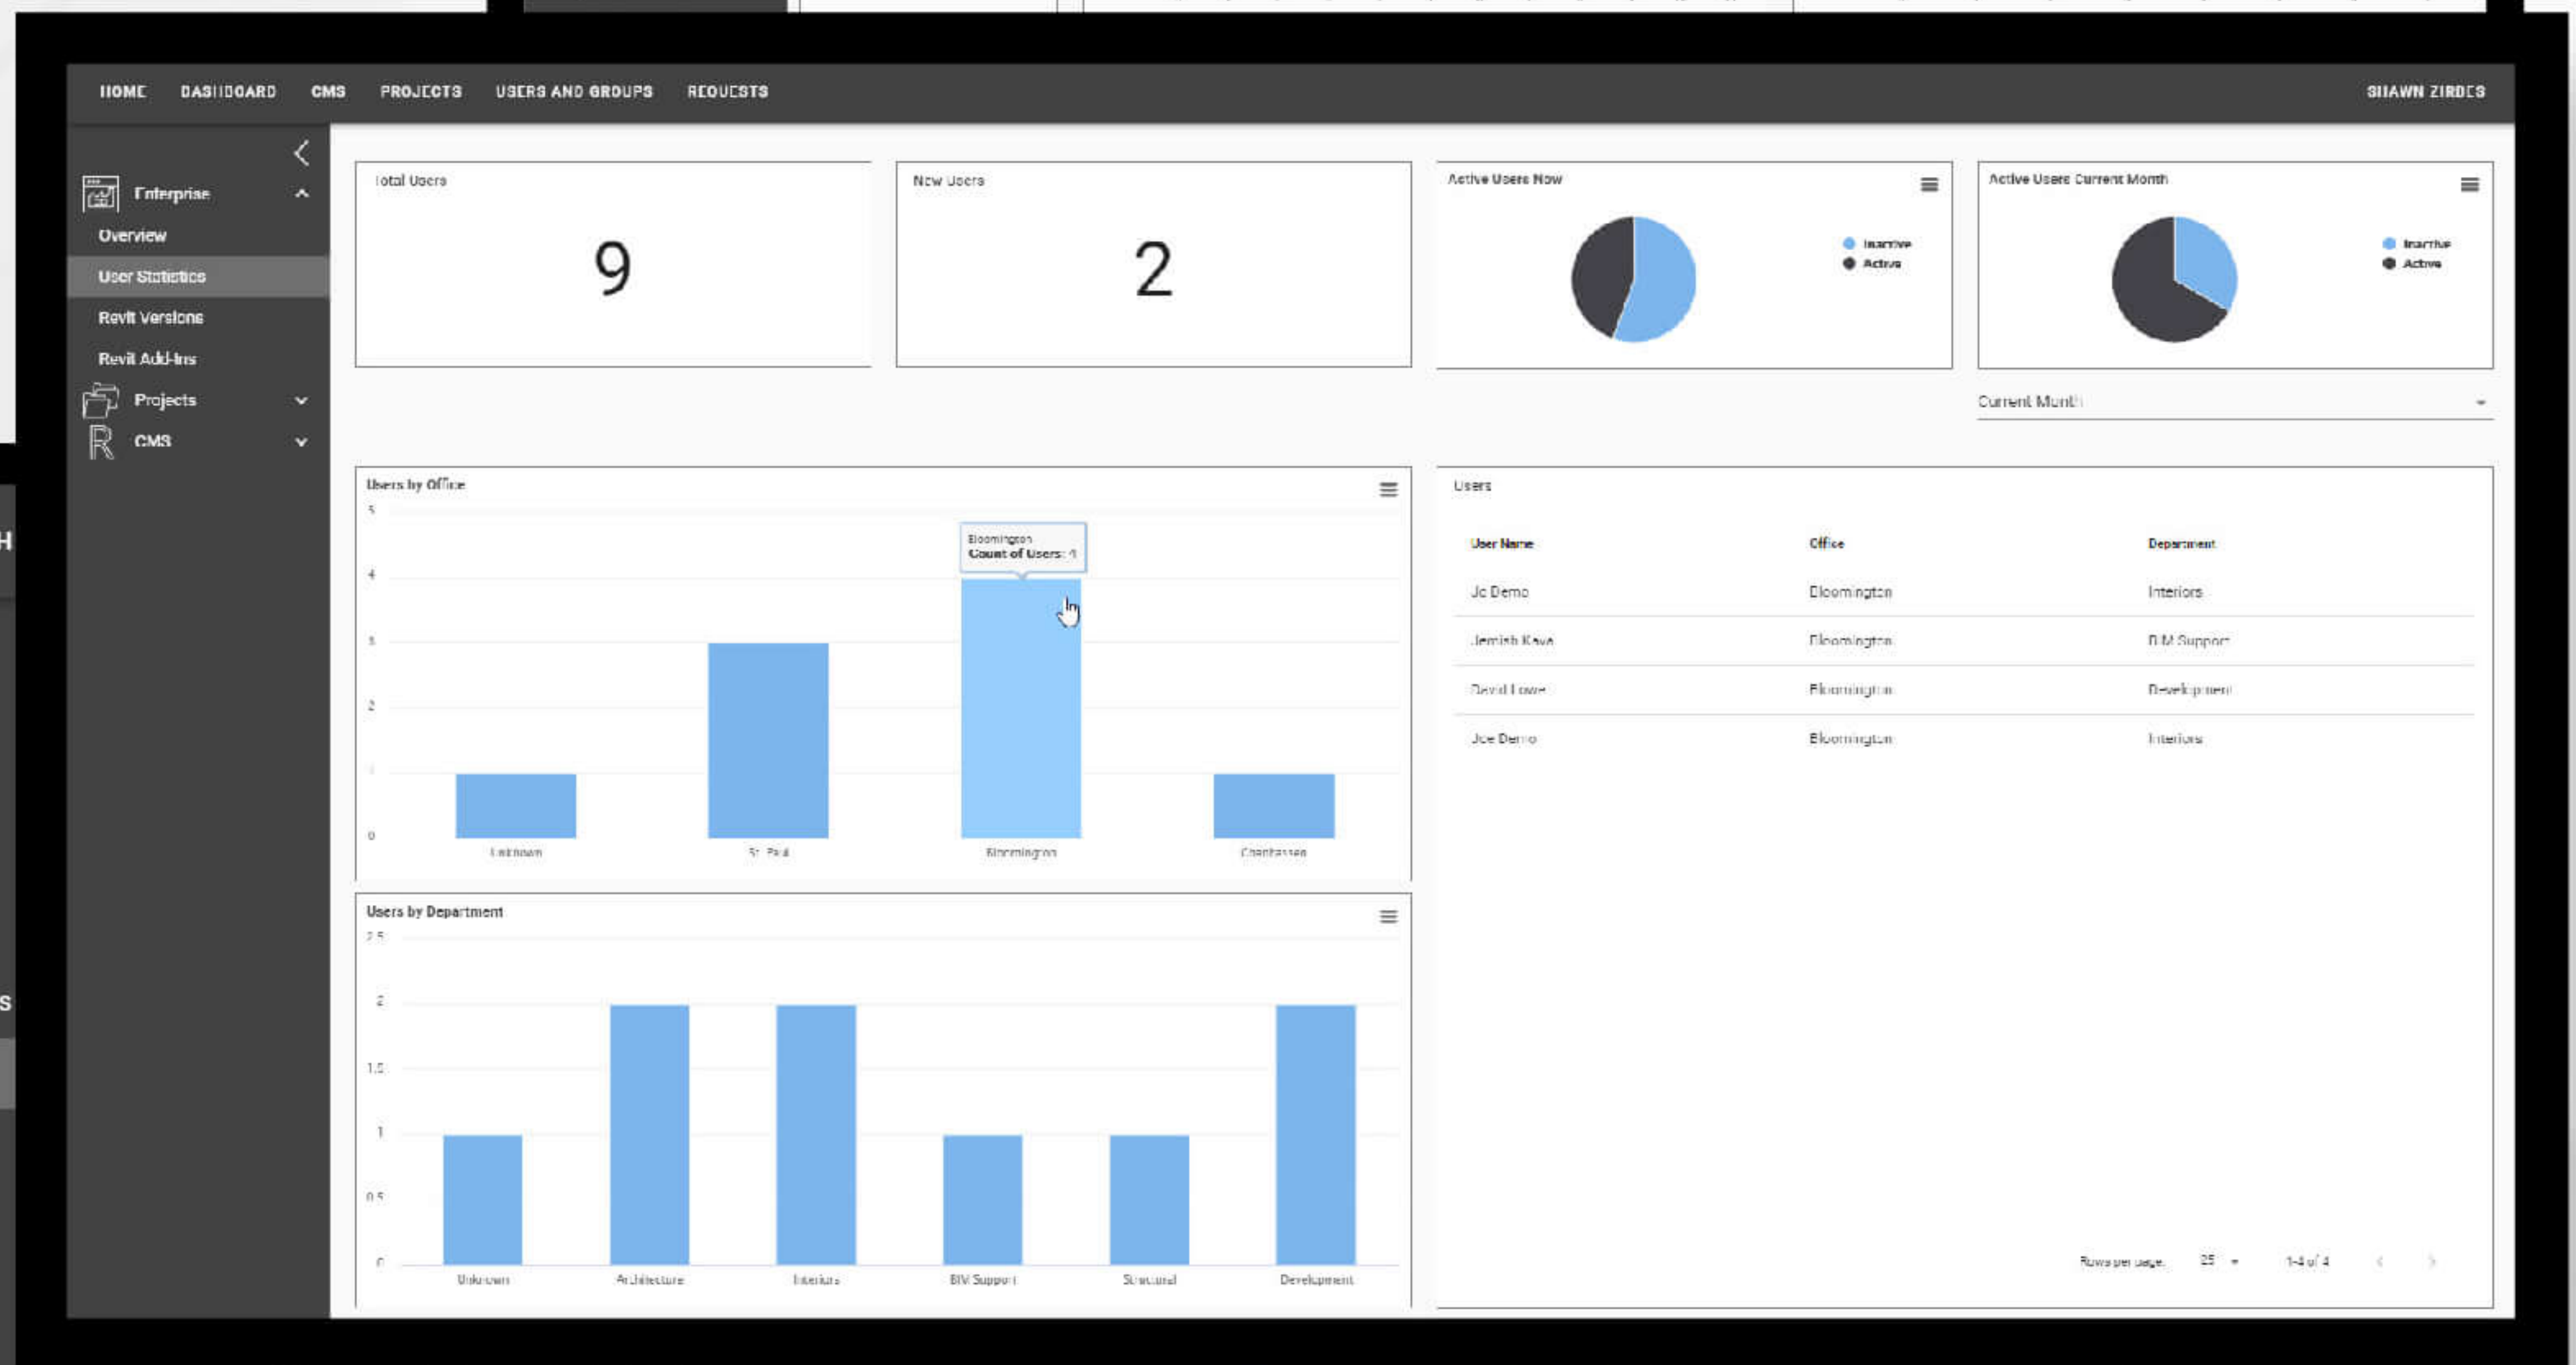

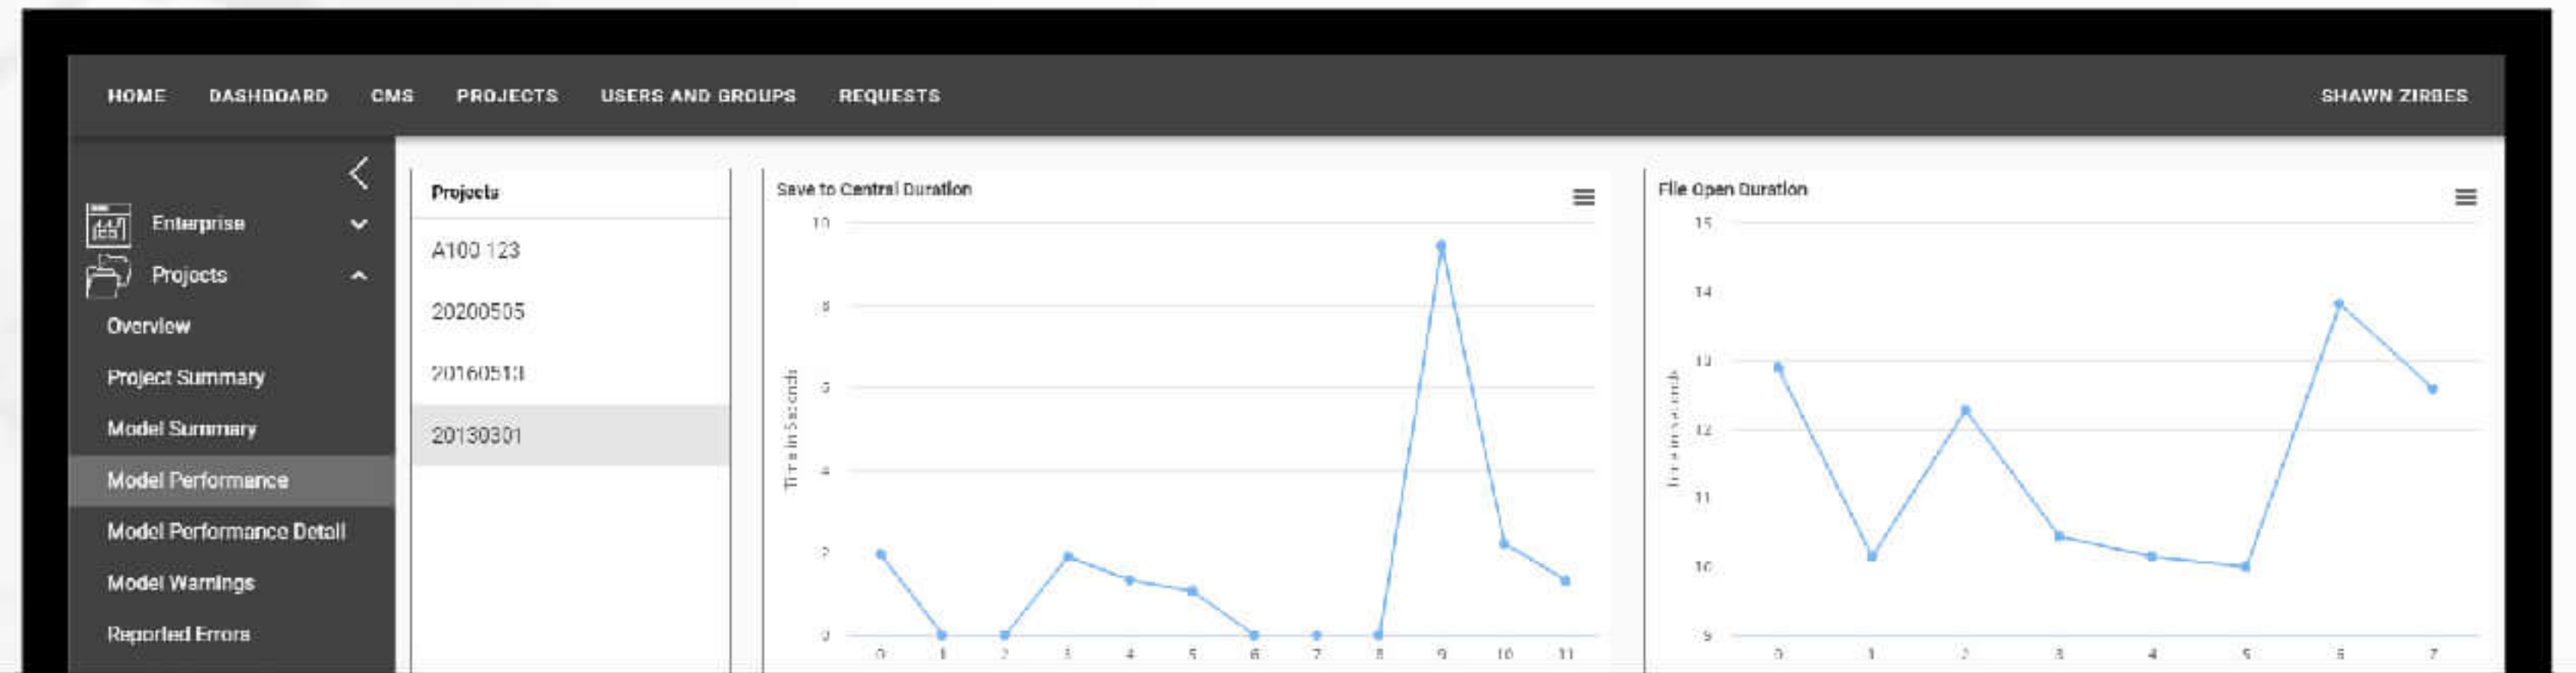

- Account Management
- Content Browsing
- Content Analytics
- Active Model Analytics

HIVE

Content Management System

CTC excels in taking care of the people who use the software. That's what really matters.

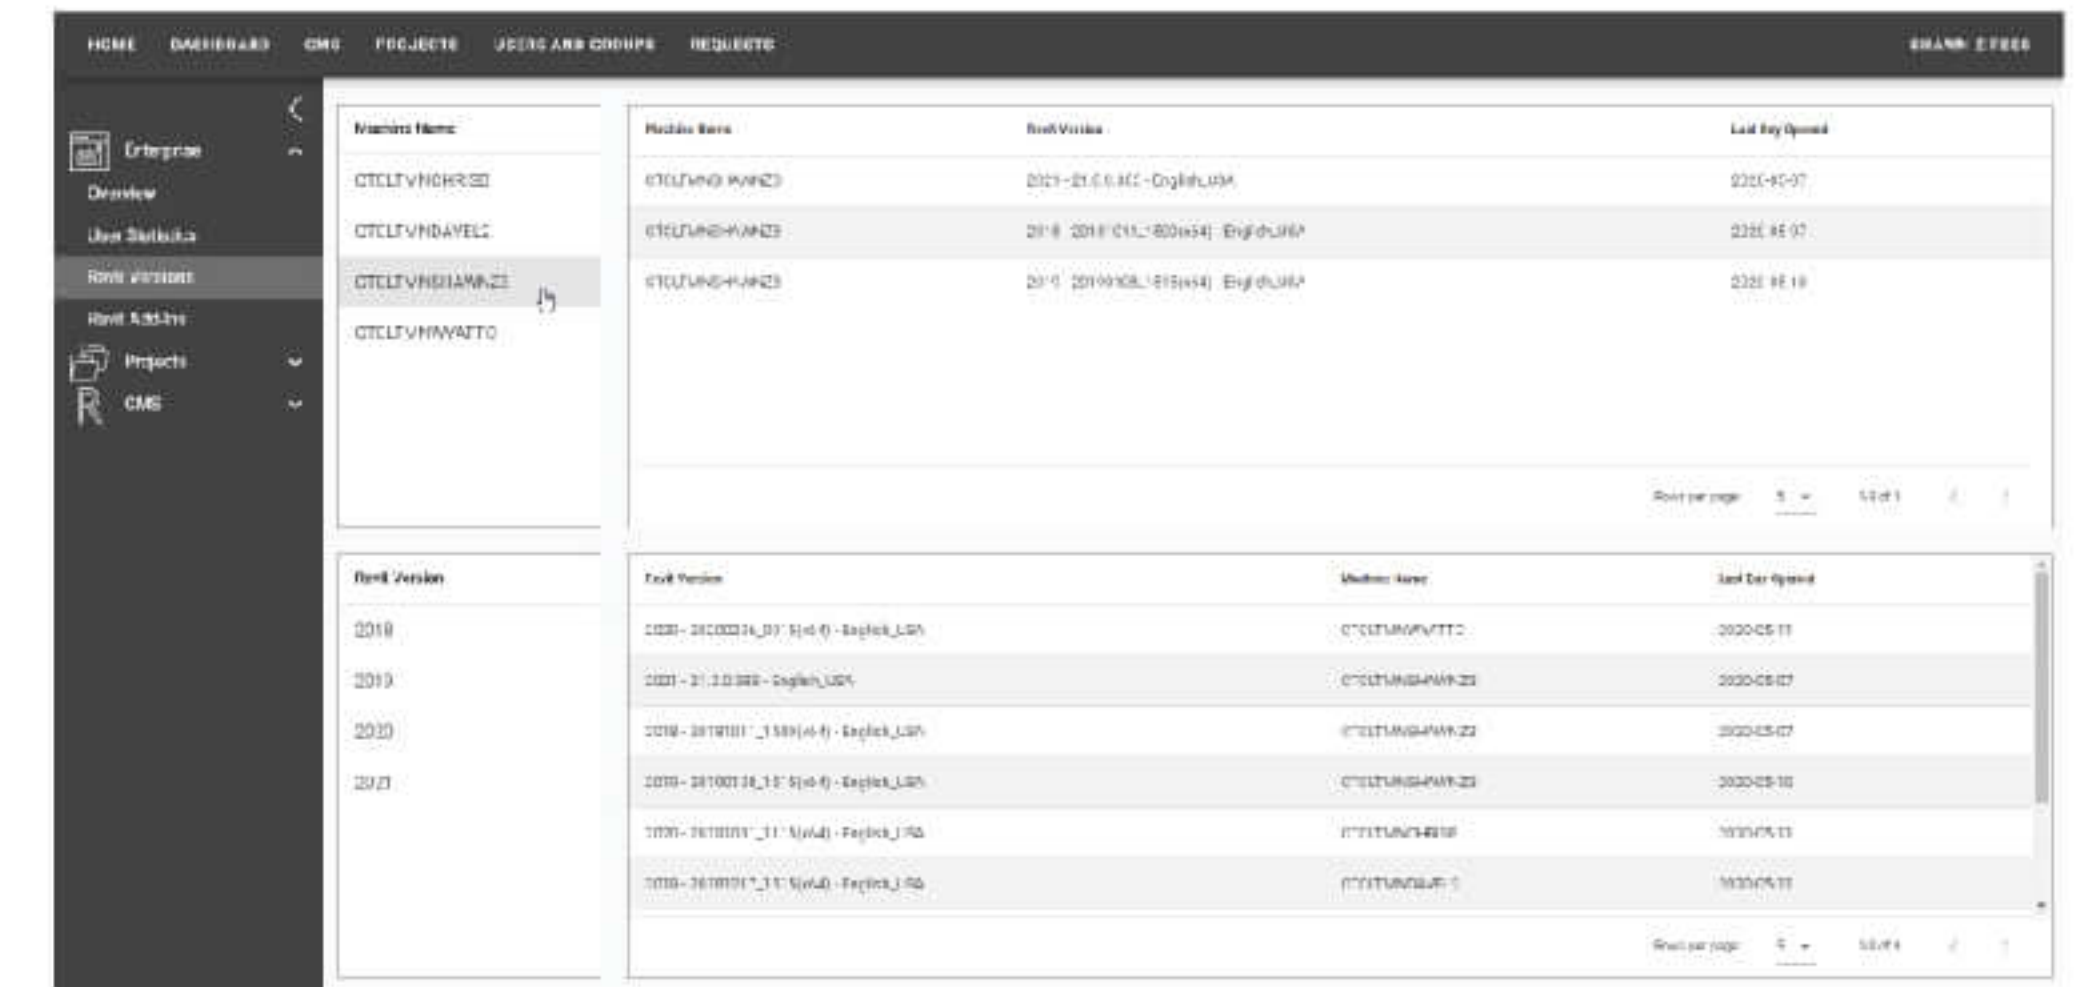

- K.T., Autodesk Marketplace Five Star Review

DASHBOARDS

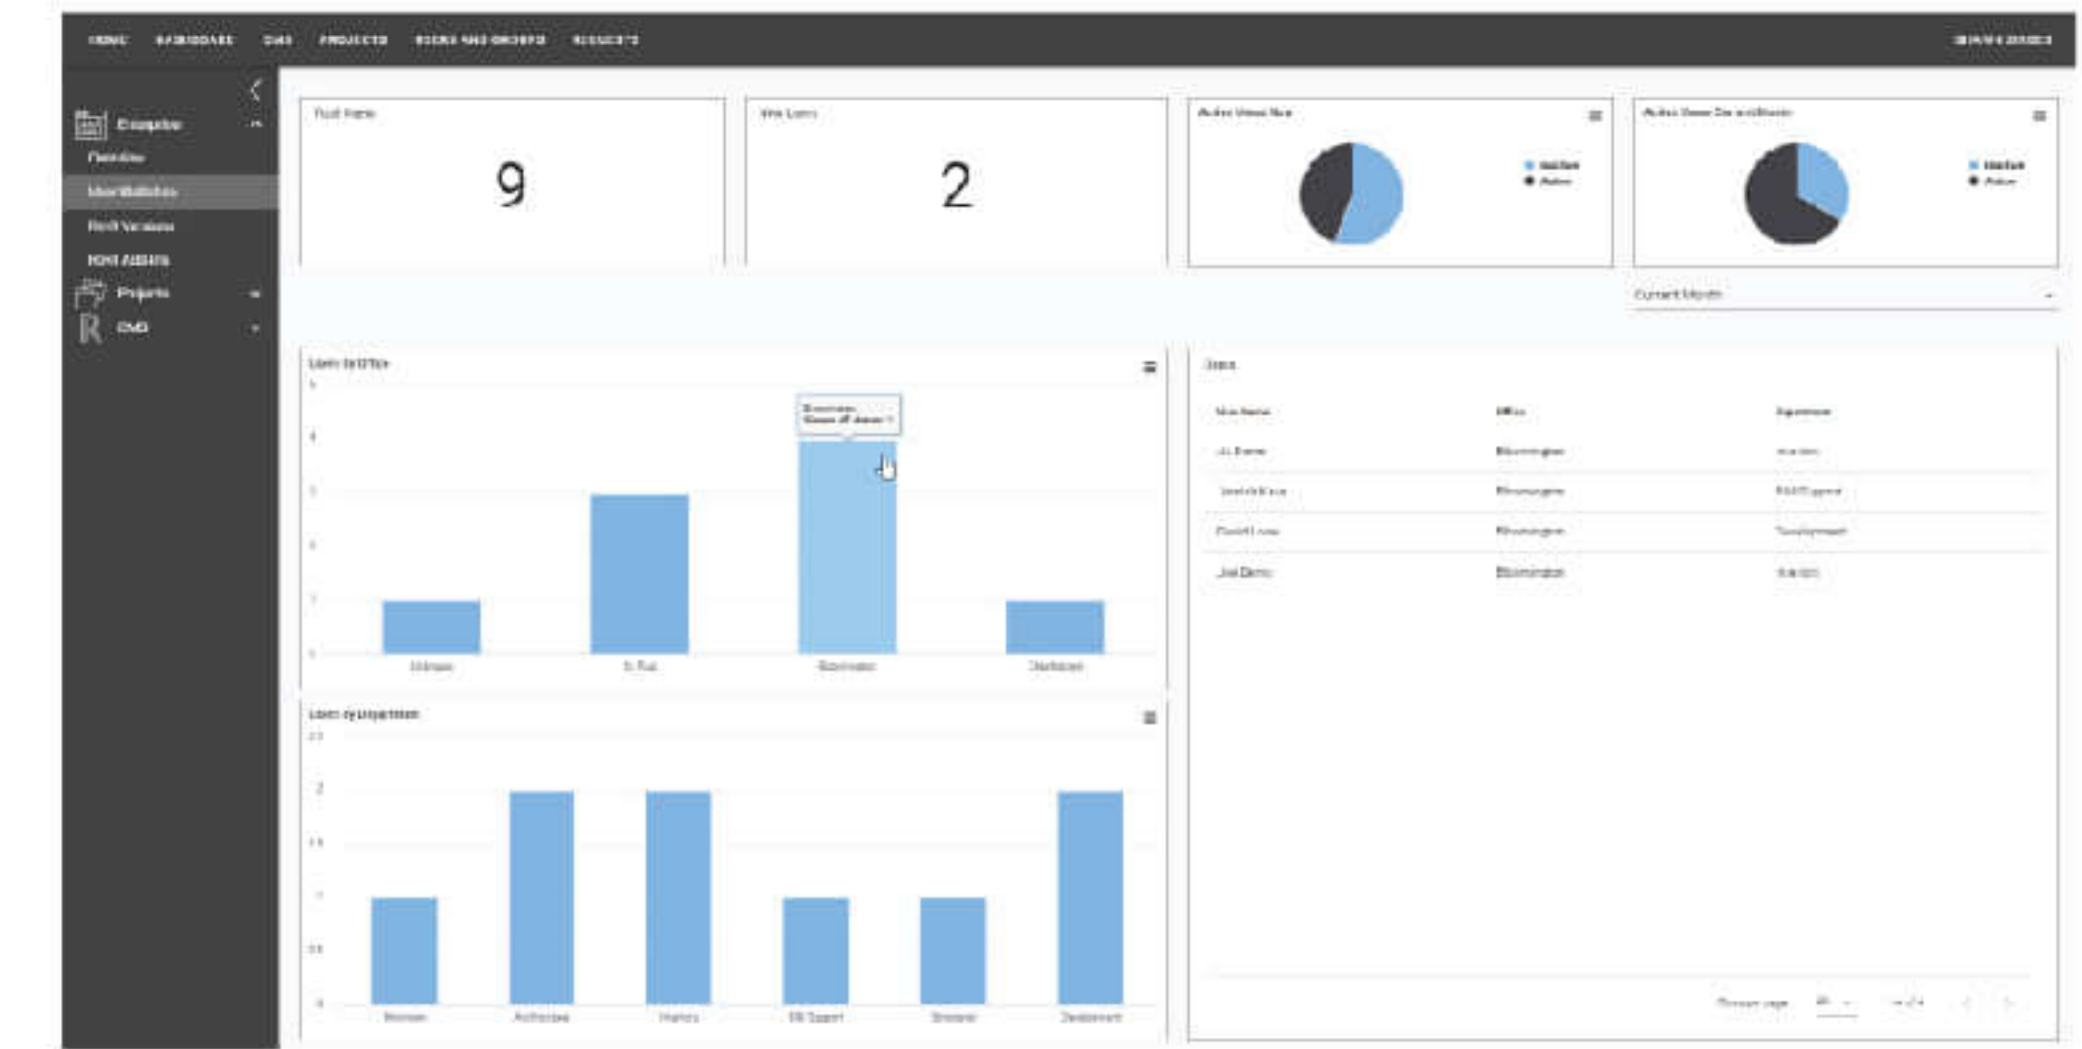

Revit Versions Dashboard

When using Revit as a design app in the firm, it is important to know where updates have been applied and where they have not. Working on Revit models across multiple updates on the same Revit version is asking for project model crashing to manifest. This dashboard can help BIM Managers understand exactly who is using Revit and what version is installed.

Enterprise Users Dashboard

helps managers quickly understand user activity in HIVE. Knowing where your users are assigned, and how active they are can help managers understand where user training and coaching may need to occur. This can also be a great start to understand licensing of HIVE across the firm.

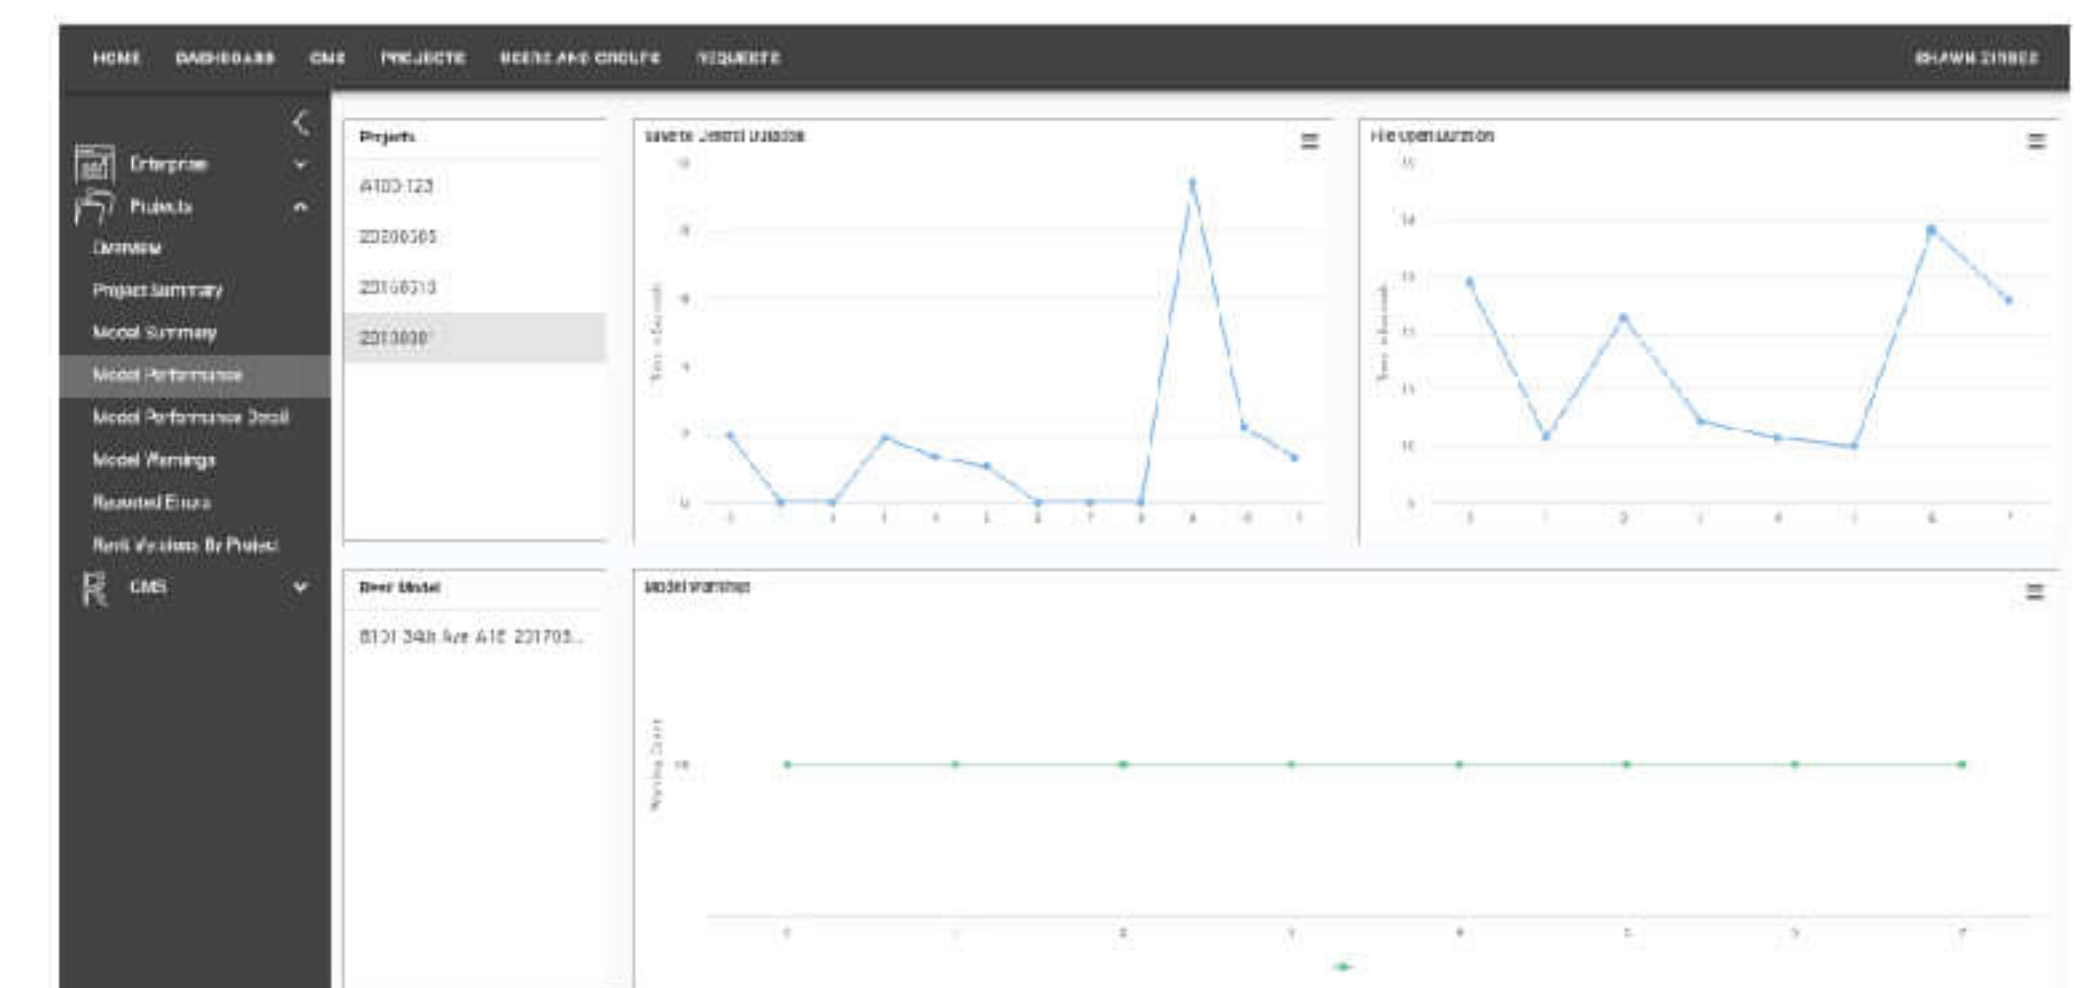

Project Overview Dashboard

Insight into corporate projects can assist BIM Managers in decision making. Is there an outlier project that has grown unexpectedly in size? Which models are opening very slowly? Knowing this helps us allocate our time to ensure the BIM environment runs smoothly.

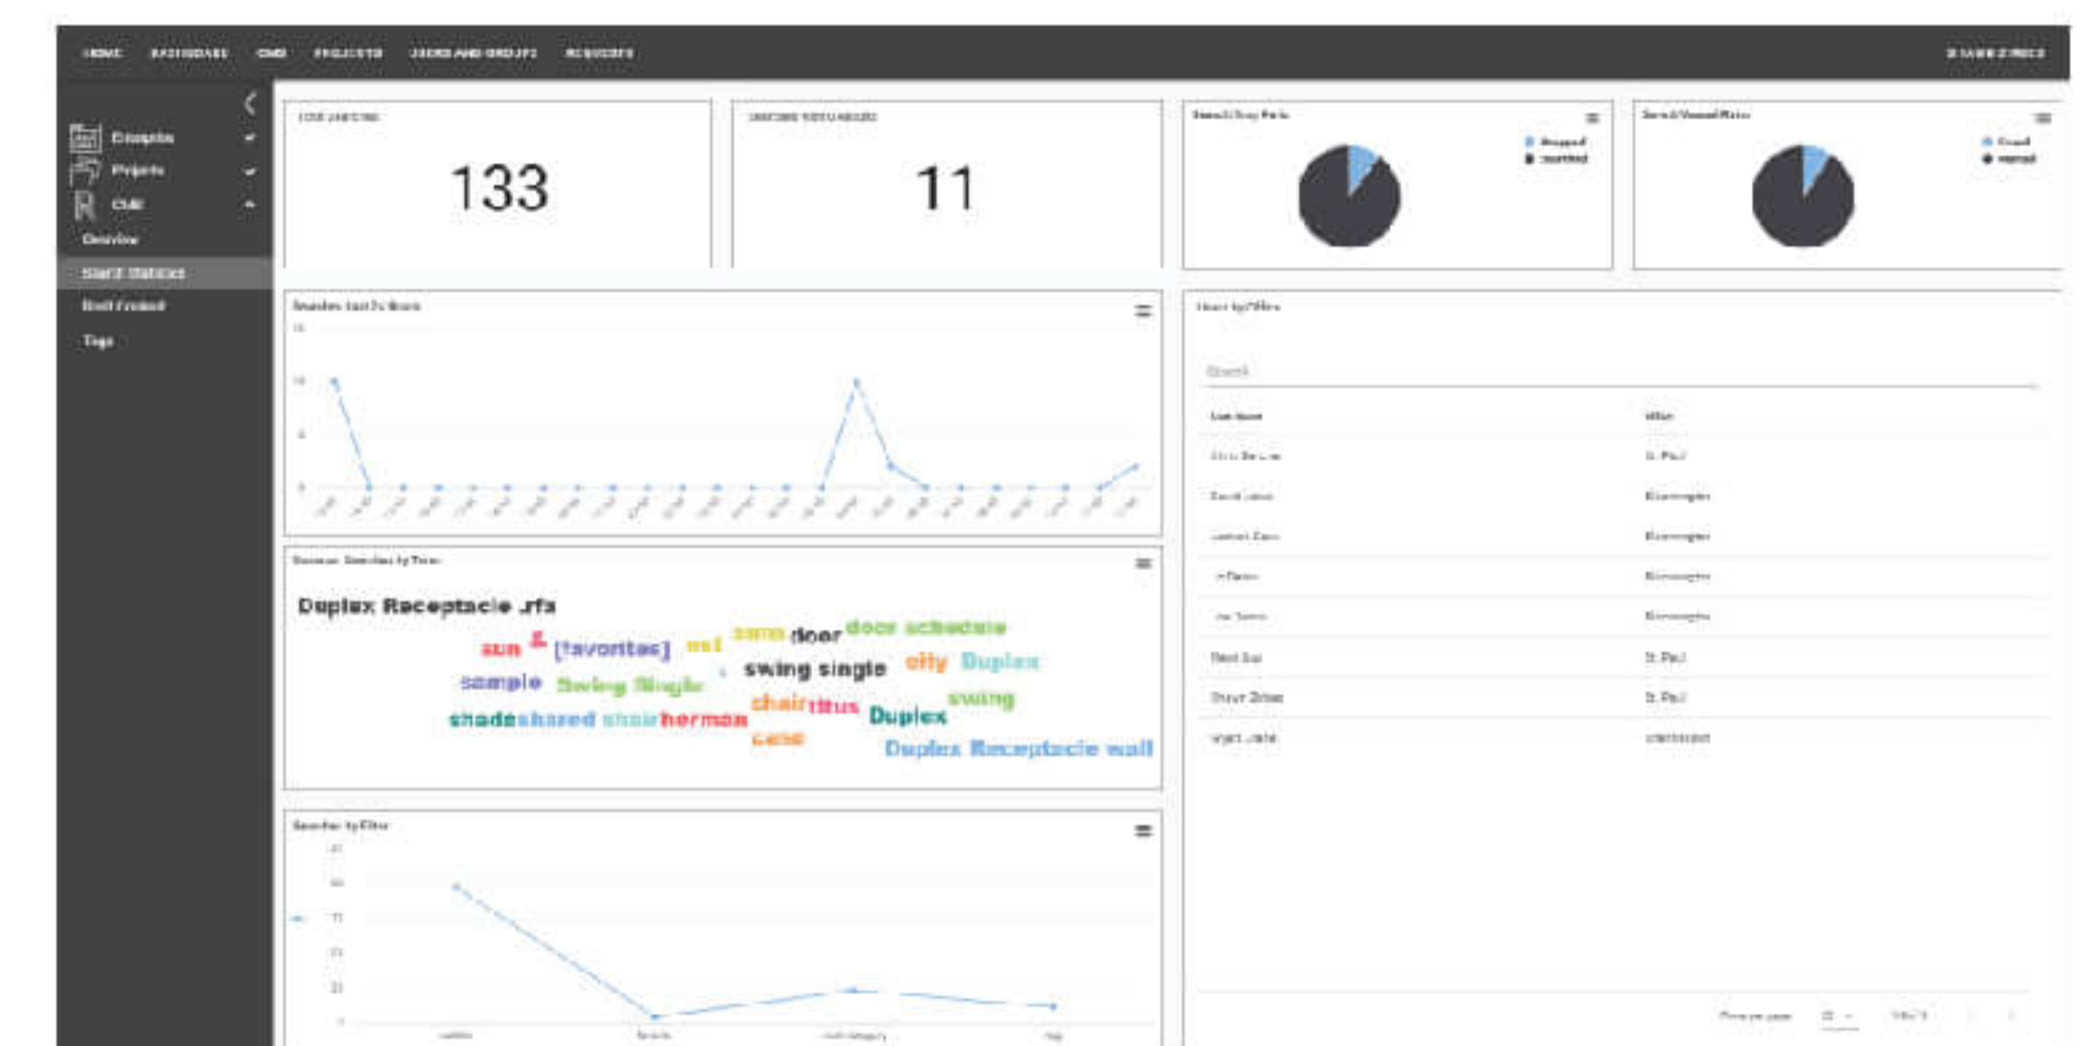

Model Performance Dashboard

When you need to dig deep into project performance issues, the most important things to know immediately is open time, save time and warning counts. After that, we can begin to understand which specific models need attention, and perhaps even what we may need to do. These 3 metrics can be easy early indicators of issues that may occur in a model. Knowing this as a BIM Manager makes it easy to act before the users are sitting stagnant because the model has already crashed.

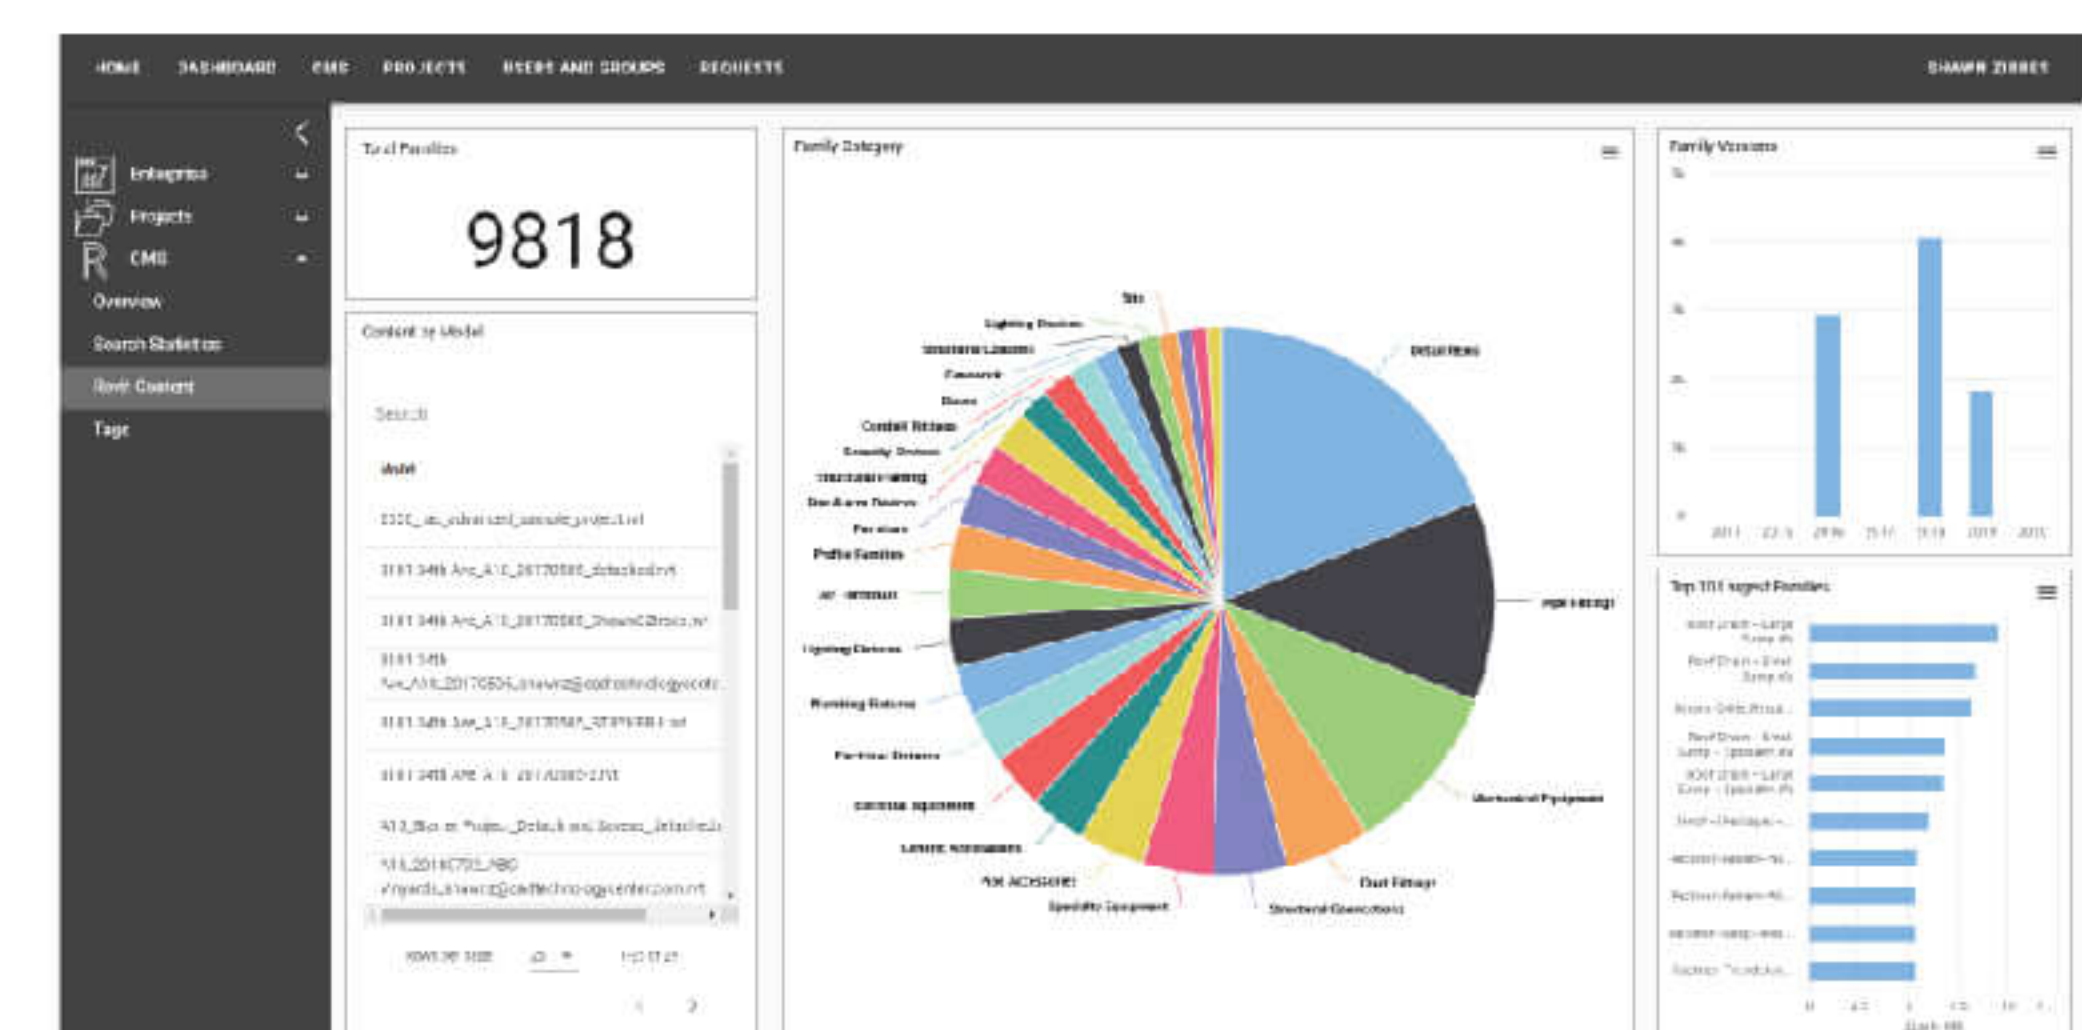

Search Statistics Dashboard

How is HIVE being searched? How are users navigating? When are they using the CMS? This dashboard provides all the insights about general searching within the HIVE CMS. Isolate users and see their specific interactions with HIVE. Understanding this can often lead to improvements in content, making the users even more pleased with the browsing experience.

Revit Content Dashboard

How is Revit content spread across your firm? Do we really know how large our family content is, and where it is being used? This dashboard explains just that. Understand version and category breakdowns. Dig into recent models to understand what families have been placed from HIVE and to derive what families have not been placed from HIVE.
